

QUALITY-, ENVIRONMENT-, HEALTH AND SAFETY POLICY

Based on the Company's work on quality and environmental aspects, as well as the occupational risks inherent in the business, we have drawn up the following policy:

'WE BUILD IN THE PRESENT FOR THE FUTURE'

Skeppsviken works to ensure that a comprehensive view is taken on each individual project, where the combination of

SKILLED PROFESSIONAL KNOW-HOW

A GOOD WORK ENVIRONMENT

THE HIGHEST POSSIBLE REGARD FOR THE ENVIRONMENT

help to ensure the right level of quality and that the customer's expectations are met.

We achieve this as follows:

- We comply with any laws, regulations, norms and other requirements that apply to us.
- We work to ensure that all employees are given the right conditions to be competent to take part in quality, health, safety and environment work, for example through training.
- We systematically review and monitor our quality, health, safety and environment work.
- We set our goals high in order to drive forward our work on improvement.
- We actively work to achieve a work environment that everyone perceives as being physically, mentally and socially good.
- We deliver fault-free products on time.
- We strive to optimise our use of resources and to minimise our negative impact on the environment, while also continuously improving our management system so that the work can be conducted in a more efficient manner.

This policy applies to everyone at Skeppsviken and its suppliers. It is based on Skeppsviken's core values and Code of Conduct, as well as being part of our management system.
